

Maksim Miliutin

FULL-STACK ENGINEER

maksim.miliutin06@gmail.com · github.com/maksim-miliutin · linkedin.com/in/maksim-miliutin
t.me/QQWaffles · bronykashop.com · Russia — open to relocation and visa sponsorship

I build products end to end and keep them running. Bronyka Shop is a marketplace I designed, wrote and deployed alone: it serves real customers, and every incident on it is mine to fix. Beside it sit six more products and 173,099 lines of TypeScript. I write tests for anything that touches someone's money or their progress, and I would rather show "cannot compute" than a confident wrong number.

SELECTED WORK

Bronyka Shop — production e-commerce marketplace

2026 — present

NestJS · Prisma · PostgreSQL · Redis · React · Docker · nginx · Cloudflare R2
250+ registered users · 252 products listed · 70+ orders processed

- Sole engineer across the whole stack: schema, REST API, storefront, deployment and production upkeep.
- JWT authentication with refresh rotation: the old session is deleted on exchange, the token is stored as a bcrypt hash, and a token that fails the check revokes every session for that user.
- Real-time buyer–seller messaging over WebSockets, with an admin panel for live message routing.
- Mobile-first PWA with offline support, RU/EN internationalisation, SEO (sitemap, Open Graph).

Trellis — language-learning platform, in progress

2026

TypeScript · gRPC · Prisma · Expo · React Native · monorepo
97,494 lines · 358 files · 598 tests · six languages

- Grammar modelled as a dependency graph: a topic unlocks once its prerequisites are consolidated, and a mistake in an essay drops that topic back into review.
- Exercises expanded from templates ahead of time and filled only with words the learner already knows, because an unfamiliar word turns a grammar check into a vocabulary check.
- Learning logic imports no framework: server, app and tests execute the same code, so no rule exists in three drifting copies.
- Not shipped yet. Logic and the seams between layers are covered by tests; the app has not been run end to end.

Reste — French medical quote calculator

github.com/maksim-miliutin/Reste

React Native · TypeScript strict · 67 tests · GitHub Actions

- Computes what a patient actually pays: an €800 crown returns €84, because cover is a share of a reimbursement base that can be a fifth of the price.
- Every rate carries the dates it was in force and a link to its source, so a figure that goes stale stops answering instead of answering wrongly.
- CI runs typecheck, lint and tests plus two custom checks: logic unreachable from the UI, and translation keys the screens ask for but no dictionary provides.

Also built

- Veilla — daily check-in calls for an elderly parent living alone; monorepo of 7 packages, 157 checks. Transcript and audio are never stored, and suppressed alarms are a measured number.
- Pasmurno — mood journal for a circle of five close people; NestJS + Prisma + Expo, 8 languages, chat encrypted on device and never stored on the server.
- Vydokh — quitting vape without shame; a slip resets the current streak and leaves best streak and total clean days alone. Expo + Supabase, 7 languages, 262 core tests.
- Mira — camera on a plate for calories and macros, camera on yourself for a face and skin read, correlated on device. Expo SDK 57, React 19, 8 languages.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL, C#, C++
Backend	NestJS, Node.js, Prisma, PostgreSQL, Redis, gRPC, REST, WebSockets (Socket.IO), JWT
Frontend	React, React Native, Expo, Vite, TanStack Query, Zustand, i18next, PWA
Infra	Docker, Docker Compose, nginx, Cloudflare + R2, Supabase, Sentry, GitHub Actions, Ubuntu
Also	.NET (EF Core), Qt, libpqxx

EDUCATION

RTU MIREA — Russian Technological University

Computer Science — two years completed

Languages

Russian, Ukrainian: native
English: reading and writing daily, still pulling it up
